New peptide inhibitors of p50/dynamitin useful for treating cancer inhibiting cellular proliferation, e.g. benign or malignant tumors, leukemia and lymphoid malignancies, or inflammatory, angiogenic and immunologic disorders. λĀ

Claim 3; Page 31; 55pp; English.

The present invention describes an isolated peptide (I) comprising or having at least 90% identity to (P1) or (P2). Where (P1) and (P2) are the sequences given in ABP52966 and ABP52967 and can have C-terminal and N-terminal extensions. (I) have cytostatic and antiinflammatory activities and can be used as p50/dynamitin inhibitors and in gene therapy. The peptides, nucleic acid molecules and methods from the present invention are useful for treating cancer by inhibiting cellular proliferation, such

The present sequence represents a specifically claimed peptide inhibitor of cellular proliferation from the present invention
                                                                                                                                                     The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    23-MAR-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches
                                                                                                                                                       The present invention describes an isolated peptide (I) comprising or having at least 90% identity to (P1) or (P2). Where (P1) and (P2) are the sequences given in ABP52966 and ABP52967 and can have C-terminal and N-terminal extensions. (I) have cytostatic and antiinflammatory activities and can be used as p50/dynamitin inhibitors and in gene therapy. The peptides, nucleic acid molecules and methods from the present invention are useful for treating cancer by inhibiting cellular proliferation, such as benign or malignant tumours (renal, liver, kidney, bladder, breast, gastric, ovarian, colorectal, prostate, pancreatic, lung, vulval, thyroid, hepatic carcinomaes, glioblatomas, and various head and neck tumours); leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, stromal and blastcocelic disorders. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Cellular proliferation inhibition; cytostatic; antiinflammatory; cancer; p50 inhibitor; dynamitin inhibitor; gene therapy; tumour; carcinoma; sarcoma; glioblatoma; leukaemia; lymphoid malignancy; neuronal disorder; glial disorder; astrocytal disorder; hypothalamic disorder; inflammatory; glandular disorder; macrophagal disorder; epithelial disorder; stromal disorder; blastocelic disorder; angiogenic disorder; immunologic disorder; p50.
                                                         inflammatory, angiogenic and immunologic disorders. The present sequence represents Drosophila melanogaster p50 which is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Drosophila melanogaster p50 protein sequence SEQ ID
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ABP53020
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ABP53020 standard; protein; 380

New peptide inhibitors of p50/dynamitin useful for treating cancer by inhibiting cellular proliferation, e.g. benign or malignant tumors; leukemia and lymphoid malignancies, or inflammatory, angiogenic and immunologic disorders.

Claim 1; Page 30; 55pp; English

The present invention describes an isolated peptide (I) comprising or CC having at least 90% identity to (P1) or (P2). Where (P1) and (P2) are the CC sequences given in ABP52966 and ABP52967 and can have C-terminal and N-CC terminal extensions. (I) have cytostatic and antiinflammatory activities and can be used as p50/dynamitin inhibitors and in gene therapy. The CC peptides, nucleic acid molecules and methods from the present invention CC are useful for treating cancer by inhibitors cellular proliferation, such CC as benign or malignant tumours (renal, liver, kidney, bladder, breast, CC gastric, ovarian, colorectal, prostate, pancreatic, lung, vulval, CC thyroid, hepatic carcinomas, sarcomas, glioblatomas, and various head and ceck tumours); leukaemias and lymphoid malignancies, other disorders such CC as neuronal, glial, astrocytal, hypothalamic and other glandular, CC macrophagal, epithelial, stromal and blastocoelic disorders; and CC inflammatory, angiogenic and immunologic disorders. The present sequence cropresents a peptide that can be N-terminally added to (P2)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes an isolated peptide (I) comprising or having at least 90% identity to (P1) or (P2). Where (P1) and (P2) are the sequences given in ABP52966 and ABP52967 and can have C-terminal and N-terminal extensions. (I) have cytostatic and antiinflammatory activities and can be used as p50/dynamitin inhibitors and in gene therapy. The peptides, nucleic acid molecules and methods from the present invention are useful for treating cancer by inhibiting cellular proliferation, such as benign or malignant tumours (renal, liver, kidney, bladder, breast, gastric, ovarian, colorectal, prostate, pancreatic, lung, vulval, thyroid, hepatic carcinomas, sarcomas, glioblatomas, and various head and neck tumours); leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, stromal and blastcoelic disorders; and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        sarcoma; glioblatoma; leukaemia; lymphoid malignancy; neuronal disorder; glial disorder; astrocytal disorder; hypothalamic disorder; inflammatory; glandular disorder; macrophagal disorder; epithelial disorder; stromal disorder; blastocoelic disorder; angiogenic disorder; immunologic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cellular proliferation inhibition; cytostatic; antiinflammatory; cancer; p50 inhibitor; dynamitin inhibitor; gene therapy; tumour; carcinoma;

CC The present invention describes an isolated peptide (I) comprising or CC having at least 90% identity to (P1) or (P2). Where (P1) and (P2) are the CC sequences given in ABP52966 and ABP52967 and can have C-terminal and N-CC terminal extensions. (I) have cytostatic and antinflammatory activities and can be used as p50/dynamitin inhibitors and in gene therapy. The CC peptides, nucleic acid molecules and methods from the present invention CC are useful for treating cancer by inhibiting cellular proliferation, such CC as benign or malignant tumours (renal, liver, kidney, bladder, breast, CC gastric, ovarian, colorectal, prostate, pancreatic, lung, vulval, CC thyroid, hepatic carcinomas, sarcomas, glioblatcomas, and various head and CC as neuronal, glial, astrocytal, hypothalamic and other glandular, CC macrophagal, epithelial, stromal and blastcocelic disorders; and CC inflammatory, angiogenic and immunologic disorders. The present sequence CC represents a peptide that can be N-terminally added to (P2)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  glial disorder; astrocytal disorder; hypothalamic disorder; inflammatory; glandular disorder; macrophagal disorder; epithelial disorder; stromal disorder; blastocoelic disorder; angiogenic disorder;
                                                                                                                                                                                                                                                                                                                                                                                                 New peptide inhibitors of p50/dynamitin useful for treating cancer inhibiting cellular proliferation, e.g. benign or malignant tumors, leukemia and lymphoid malignancies, or inflammatory, angiogenic and immunologic disorders.
                                                                                                                                                                                                                                                                                                                                                              Claim 1; Page 30; 55pp;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC The present invention describes an isolated peptide (I) comprising or CC having at least 90% identity to (P1) or (P2). Where (P1) and (P2) are the CC sequences given in ABP52966 and ABP52967 and can have C-terminal and N-CC terminal extensions. (I) have cytostatic and antiinflammatory activities and can be used as p50/dynamitin inhibitors and in gene therapy. The CC peptides, nucleic acid molecules and methods from the present invention CC are useful for treating cancer by inhibiting cellular proliferation, such CC as benign or malignant tumours (renal, liver, kidney, bladder, breast, CC gastric, ovarian, colorectal, prostate, pancreatic, lung, vulval, CC thyroid, hepatic carcinomas, sarcomas, glioblatomas, and various head and neck tumours); leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic and other glandular, CC macrophagal, apthelial, stromal and blastocoelic disorders; and CC inflammatory, angiogenic and immunologic disorders. The present sequence compresents a peptide that can be N-terminally added to (P2)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           terminal extensions. (I) have cytostatic and antiinflammatory activities and can be used as p50/dynamitin inhibitors and in gene therapy. The peptides, nucleic acid molecules and methods from the present invention are useful for treating cancer by inhibiting cellular proliferation, such as benign or malignant tumours (renal, liver, kidney, bladder, breast, gastric, ovarian, colorectal, prostate, pancreatic, lung, vulval, thyroid, hepatic carcinomas, sarcomas, glioblatomas, and various head and neck tumours); leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, stromal and blastocoelic disorders; and inflammatory, angiogenic and immunologic disorders. The present sequence represents a peptide that can be N-terminally added to (P2)
                                                                                                                                                                     Cellular proliferation inhibition; cytostatic; antiinflammatory; cancer; pso inhibitor; dynamitin inhibitor; gene therapy; tumour; carcinoma; sarcoma; glioblatoma; leukaemia; lymphoid malignancy; neuronal disorder; glial disorder; satrocytal disorder; hypothalamic disorder; inflammatory; glandular disorder; macrophagal disorder; epithelial disorder; stromal disorder; blastocoelic disorder; angiogenic disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes an isolated peptide (I) comprising or having at least 90% identity to (P1) or (P2). Where (P1) and (P2) are t sequences given in ABP52966 and ABP52967 and can have C-terminal and N-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes an isolated peptide (I) comprising or CC having at least 90% identity to (P1) or (P2). Where (P1) and (P2) are the CC sequences given in ABP52965 and ABP52967 and can have C-terminal and N-CC terminal extensions. (I) have cytostatic and antiinflammatory activities and can be used as p50/dynamitin inhibitors and in gene therapy. The CC peptides, nucleic acid molecules and methods from the present invention CC are useful for treating cancer by inhibitors cellular proliferation, such CC as benign or malignant tumours (renal, liver, kidney, bladder, breast, CC gastric, ovarian, colorectal, prostate, pancreatic, lung, vulval, CC thyroid, hepatic carcinomas, sarcomas, glioblatomas, and various head and neck tumours); leukaemias and lymphoid malignancies, other disorders such CC macrophagal, gaithelial, stromal and blastocoelic disorders; and CC inflammatory, angiogenic and immunologic disorders. The present sequence cc represents a peptide that can be N-terminally added to (P2)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

```

The present invention describes an isolated peptide (I) comprising or CC having at least 90% identity to (P1) or (P2). Where (P1) and (P2) are the CC sequences given in ABP52966 and ABP52967 and can have C-terminal and N-CC terminal extensions. (I) have cytostatic and antiinflammatory activities CC and can be used as p50/dynamitin inhibitors and in gene therapy. The CC peptides, nucleic acid molecules and methods from the present invention CC are useful for treating cancer by inhibiting cellular proliferation, such CC as benign or malignant tumours (renal, liver, kidney, bladder, breast, CC gastric, ovarian, colorectal, prostate, pancreatic, lung, vulval, CC thyroid, hepatic carcinomas, sarcomas, glioblatomas, and various head and CC neck tumours); leukaemias and lymphoid malignancies, other disorders such CC as neuronal, glial, astrocytal, hypothalamic and other glandular, CC macrophagal, epithelial, stromal and blastocoelic disorders; and CC represents a peptide that can be N-terminally added to (P2)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC having at least 90% identity to (P1) or (P2). Where (P1) and (P2) are the CC sequences given in ABP52966 and ABP52967 and can have C-terminal and N-CC terminal extensions. (I) have cytostatic and antiinflammatory activities and can be used as p50/dynamitin inhibitors and in gene therapy. The CC are useful for treating cancer by inhibiting cellular proliferation, such CC as benign or malignant tumours (renal, liver, kidney, bladder, breast, CC gastric, ovarian, colorectal, prostate, pancreatic, lung, vulval, CC thyroid, hepatic carcinomas, sarcomas, glioblatomas, and various head and CC neck tumours); leukaemias and lymphoid malignancies, other disorders such CC as neuronal, glial, astrocytal, hypothalamic and other glandular, CC macrophagal, epithelial, stromal and blastocoelic disorders; and CC represents mouse p50 which is given in the exemplification of the present or invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Best Loc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes an isolated peptide (I) comprising or CC having at least 90% identity to (P1) or (P2). Where (P1) and (P2) are the Sequences given in ABP52966 and ABP52967 and can have C-terminal and N-CC terminal extensions. (I) have cytostatic and antiinflammatory activities and can be used as p50/dynamitin inhibitors and in gene therapy. The CC peptides, nucleic acid molecules and methods from the present invention CC are useful for treating cancer by inhibiting cellular proliferation, such CC as benign or malignant tumours (renal, liver, kidney, bladder, breast, CC gastric, ovarian, colorectal, prostate, pancreatic, lung, vulval, CC district, hepatic carcinomas, sarcomas, glioblatomas, and various head and neck tumours); leukaemias and lymphoid malignancies, other disorders such CC as neuronal, glial, astromal and blastocoelic disorders; and CC inflammatory, angiogenic and immunologic disorders. The present sequence CC represents a specifically claimed peptide inhibitor of cellular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches

                                                 CC polypeptides, and their related nucleic acids. The TAT polypeptides are CC overexpressed in cancer tissues compared to normal tissues, and may thus CC serve as effective targets for the diagnosis and treatment of cancer in CC mammals. The invention also relates to nucleic acid and polypeptide CC polypeptides; expression vectors and host cells comprising a TAT nucleic acid; an antibody specific for a TAT polypeptide; a peptide or organic CC molecule which binds to a TAT polypeptide; a peptide or organic CC molecule which binds to a TAT polypeptide; apptide or organic CC molecule which binds and compositions for the treatment or CC diagnosis of cancer in mammals. TAT polypeptides, nucleic acids, CC antibodies, antagonists, binding molecules and compositions are useful CC for diagnosing or treating a cell proliferative disorder associated with increased TAT expression, particularly cancers such as breast cancer, CC colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder cancer, pancreatic cancer, cervical cancer, cancers of the central CC cancer, pancreatic cancer, cervical cancer, cancers of the central CC cancer, melanoma and leukaemia. TAT nucleic acids may further be CC used as hybridisation probes, in chromosome and gene mapping, in CC chromosome identification and in gene therapy. The present sequence

PUNCTION: Modulates cytoplasmic dynein binding to an organelle, and plays a role in prometaphase chromosome alignment and spindle organization during mitosis. May play a role in synapse formation during brain development.

FUNCTION: Muscle contraction.

SUBUNIT: Muscle myosin is a hexameric protein that consists heavy chain subunits (MfC), 2 alkali light chain subunits (MfC-2), and 2 regulatory light chain subunits (MfC-2).

SUBCELLULAR LOCATION: Thick filaments of the myofibrils.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       89:289-294 (1990).
